

BIO DEODORIZERS

WHY BIO?

The benefits of using Safe-T-Fresh BIO products go well beyond odor control and protecting the environment. They also eliminate waste build-up in tanks, hoses and pipes. The natural bacteria, when left in a tank or system, multiply over time and increase in effectiveness, breaking down solids into a liquid. Your tanks, hoses and pipes will no longer have hardened waste that produces continual odor. And, waste treatment plants will benefit from the added natural bacteria, which helps you obtain or maintain your current dump permits.

BIO deodorizers are available in packet and liquid form. Use the QuickScents Bio 30 gram packets for moderate levels of traffic and heat and the Bio 60 gram for high heat and traffic. For liquids, use STF 3000 in moderate conditions and STF 5000 for extreme conditions.

QuickScents Bio 60g Packets

- Environmentally Safe
- Use for heavier traffic and higher heat
- Long Lasting Blue Color
- Beneficial to Waste Dump Sites
- Liquefies Waste and Tissue

QuickScents Bio 30g Packets
